# Java Developer

## Who can apply:

Candidates with one or more years of experience working as Java engineers. Formal education in IT is not required, but is a plus. We will give an advantage to the candidates with a Bachelor's or Master's degree in IT.

## Your responsibilities:

- Writing reusable, testable, and efficient code
- Writing documentation
- Designing and implementation of low-latency, high-availability, and high-performance applications
- Implementation of security and data protection
- Integration of data storage solutions (may include databases, key-value stores, blob stores, etc.)
- Communication with the team and clients on a daily basis
- Contributing to all stages of software development life cycle

## Required skills:

- Proven hands-on software development experience
- Object-oriented analysis and design using common design patterns
- Extensive knowledge and understanding of modern versions of Java
- Experience in working with Spring and Spring Boot
- Experience with testing libraries (e.g., JUnit, TestNG)
- Experience with build automation tools (e.g., Maven, Gradle)
- Knowledge of industries' best practices
- Integration of multiple data sources and databases into one system
- Relational databases and knowledge of SQL
- Understanding fundamental design principles behind a scalable application
- Creating database schemas that represent and support business processes
- Proficient understanding of code versioning tools, such as Git
- A Bachelor's degree in Computer Science, Engineering, or related fields is a plus, but not required

# Nice to have:

- Experience in working in Fintech, Insurtech, Retail, or Medtech domains
- Experience in working with microservice architecture
- Experience in working with Cloud Platforms (such as AWS, Azure, Google Cloud)
- Experience in working with Serverless architecture
- Good knowledge of Docker and Kubernetes
- Good knowledge of at least one front-end framework (React.js, Angular, Vue.js...)
- Knowledge of frameworks other than Spring/Spring Boot (e.g., Play Framework, vert.x, Akka, Micronaut, etc.)
- Experience in working with NoSQL databases

# Benefits of working in our team:

- Working on a large number of different projects that will provide you with an opportunity to work with various startups
- Expanding knowledge and growing together with the team
- Getting to know different teams from different countries and meeting different organizational cultures which will provide you with a chance for personal and professional development
- Involvement in a challenging and dynamic working environment
- Having the entire team's support in helping you blend into the company's culture, fit in, and bond with others
- Having the entire team's support in helping you sharpen your skills
